

This landmark project incorporates cutting edge design methods.

Postenco's role is to design and construct post-tensioned slabs to 18 levels of suspended slabs.

Postenco is an engineering and contracting company, specialising in the design and installation of post-tensioning systems for large scale projects. The company was awarded the design and construct contract for the 18 level Collins Square Project Tower A and Tower C Podium, by Form 700 and Built, and company design team is working closely with the construction team through the design phase, to co-ordinate the design interfaces, building services and develop techniques to maximise efficiencies in construction.

For the Collins Square Project, Postenco has utilised a design to all suspended slabs incorporating a well proven, one-way post-tensioning system with limited reinforcement content.

Post-tensioning systems specialists, Postenco, focus on providing innovative and cost effective solutions for their clients and this approach is clearly evident in their work on the Collins Square Project.
